

WALTERS FENCING

Fencing Equipment Specialists

PRODUCT CATALOGUE

Walters Fencing

is an innovative and growing family owned business based near Tamworth in north-west New South Wales. We provide rural and security contract fencing services and we design and manufacture specialised fencing equipment for distribution throughout Australia and beyond. The equipment has been tried and tested in the demanding field of contract fencing and this in-field testing ensures a high quality product that will benefit both the contractor and the farmer.

THE BLUE JENNY WIRE SPINNER

The Blue Jenny Wire Spinner is a one piece robust wire spinner built to reduce frustrating tangles and take some of the angst out of fencing.

The main features and benefits are:

- A wire pickup arm that lifts the wire out of the coil and helps to stop the "pull through the coil" tangle. This is the first point to thread the wire when opening a new coil.
- A drive ring that allows the wire to drive the spinner. After having passed through the pickup arm roller the wire is wrapped around the drive ring once before passing through the brake arm. As the wire is pulled, the loop around the drive ring pulls tight and transfers energy and starts the spinner turning. This leaves the coil loose and undisturbed.
- The brake arm is the next place to thread the wire. The brake is deactivated when tension is applied to the wire and the brake activated when you stop pulling on the wire or driving forward. This means easy pulling and no over spin tangles. The brake has a two stage setting to allow you to fine tune the braking intensity.

The Blue Jenny Wire Spinner is equally able to sit on the ground or in the back of the ute/trailer, as a single or part of a stacked module.

NETTING ROLLER AND HYDRAULIC POWERED WIRE WINDERS

Our netting roller and hydraulic powered wire winders come in two styles; a barrel type roller for netting, hinged joint and ringlock based fences and a reel type winder for plain and barbed wires. Our range consists of one roller and three different winder models.

Netting Roller

The Netting Roller is designed to mount to the front of a skid steer loader, tractor front end loader or even a 3-point tractor linkage. The Netting Roller is heavy-built, designed to handle all types of fence and can even pull netting out of the ground and roll it up. The Netting Roller also has a plain/barbed wire rolling accessory that will convert the roller into a plain wire winder.

PRODUCT PRICE: PRICE: \$8,100.00 + GST & DELIVERY
Price does not include mounting plate and fitting.

Wire Winder - Contractor Model

The Contractor Model is a 3-point linkage or fork mounted wire winder with a separate spool valve and fully guarded mechanism. This unit is operated at the winder and is the first choice if you have a lot of fence removal to undertake. All operations take place at the winder which increases efficiency. The winder can handle multiple barbed wires or multiple plain wires and includes a wire grab to stop the wire unspooling when winder stops. The finished rolls slide easily off the tapered guides to allow quick turnaround when pulling wires. The completed roll size is designed to be compatible with standard wire spinners to enable re-use of the wire.

PRODUCT PRICE: \$4,380.00 + GST & DELIVERY

Wire Winder - Farm Model

The Farm Model is a lower cost alternative wire winder that is 3-point linkage or fork mounted but operated from the tractor cabin. This model does not have the full guard around the winder due to the remote operation of this unit. All other aspects of the winder remain the same as the Contractor Model.

PRODUCT PRICE: \$3,350.00 + GST & DELIVERY

HAND POWERED

Wire Winder - Hand Powered Model

The Hand Powered Wire Winder is a compact light weight solution to winding up old fence wire or temporary electric fencing wire. The winder will attach to most tray sides to negate the need to have a tractor on site. The winder can be used to wind up plain wire or barbed wire and the finished coil is easily removed on completion. This is great piece of kit for those small jobs or space or where terrain imposes limits on access by larger machinery.

PRODUCT PRICE: \$685.00 + GST & DELIVERY

THE PR 25 POST RACK

The PR 25 is the latest development of our star post rack. This was the piece of equipment that originally opened up the potential of our fencing system. Using multiple wire spinners and pre-threading star posts in a post rack we could triple the distance of fence we could build with no extra labour input.

The PR 25 is designed as a module with a 25 post capacity. Up to 4 modules can be bolted together on a standard trailer to give an overall capacity of 100 star posts. At 5m post centres, this enables construction of 500m of fence in

one pass. The PR 25 is designed to fit all standard star posts (Australian and imported) of good quality manufacture. We have conversion kits available to suit Waratah JIO star posts and JIO Maxi posts also. Good quality second hand posts with the same hole spacing will also fit.

PRODUCT PRICE: \$650.00 (PER MODULE) + GST & DELIVERY

PR 25 POST RACK

THE BLUE JENNY MODULE STACKER

The Blue Jenny Module Stacker holds up to three Blue Jenny wire spinners to enable multiple wires to be run at the same time. If you need to run more than three wires you can sit extra spinners nearby or run two stackers side by side. The magazine style loading means you can load one spinner at a time regardless of how much wire remains in the other spinners.

PRODUCT PRICE: \$320.00 + GST & DELIVERY
